

The General Surgery Department uphold a multi-faceted mission: to provide compassionate, superior patient care; to offer for a broad spectrum of surgical procedures; to evaluate and facilitate appropriate referrals to higher centers within and outside the state for tertiary care procedures.

Our surgical expertise is divided into patient management categories that include breast cancer, reconstructive surgeries for patients of burns, post traumatic disfigurements, post cancer surgeries; gastrointestinal tumors, and other general surgical procedures.

The department runs a General Surgical OPD every day and a follow-up clinic 4 days a week

The department provides emergency care for traumatic and non-traumatic emergencies round the clock.

The department provides for consultation and care of patients suffering from chronic wounds and patients with chronic venous insufficiency, patients with benign and malignant diseases of the breast.

Surgery itself is an ever challenging science and art. Due to the evolving social environment and value, there is an absence of willingness for young doctors to devote themselves to such a high risk occupation. Our department will continue to demand the standard of our great surgical tradition, aiming for complete clinical service.

Some of the common procedures performed at our hospital include -
